A. Questionnaire Analyses: Description

The Statistics

The statistics summarising the results of the survey are presented in separate sections below, corresponding to the sections used in the survey itself. In order to provide context at the start of this document the basic response statistics are given first in section B below, and the "About you" statistics are brought to the front in section C.

The results from the various sections of the questionnaire (including 'Vision for Muckhart' - section D) covering 'Image of the Village' through to 'Public Services', are then presented in order in sections 1 to 8 below.

For the characteristics of the responders to the questionnaire in section C, for each question the numbers are given for each possible response (Including numbers skipping the question) and percentages for each of these over all 115 responses, The figures are accompanied by a chart, either a bar chart of pie chart, as considered appropriate. Some basic commentary is also added where appropriate.

For the questions in the bulk of the survey, the following is provided in order:

- Basic statistics: the number answering the question (and percentage over 115); the number of times the question was skipped (and percentage); the total of these (to check should be 115 and 100%); and the mean, mode and the median of the responses given on the scale 0 to 10 (see description below)
- The distribution of answers (on the scale 0 to 10, plus the number of no answers i.e. counts of the answers to each of these values. They are also expressed as percentages over all 115 records and over the number answering that question
- A histogram showing the responses to each possible value (including the number of skips in red). For a few questions where a matrix was employed the graph is shown in 3-D format
- A basic commentary, highlighting some key results
- If there was a supplementary question asking about 'Willingness to be involved', then the numbers (and percentages) of those answering 'Yes', 'No', 'Maybe' and skipping the question are given, together with a pie chart

Notes on: Mean, Mode, Median, etc.

These are all measures of what is generally referred to as an average; a single figure characterising the answers as a whole.

The Mean is obtained by adding up all the answers and dividing by the number of numbers and is most commonly used. However, it can be unduly influenced by extreme values.

The Mode is the value which most people answer and, as such, may be thought of as the representative value; interestingly, in this survey nearly all the modal values were 10 (I.e. complete agreement) even though the Mean or Median were much less than 10.

The Median is the value that lies in the middle of the set of answers – imagine all the answers to a question set out in a list from smallest to largest – the Median is the value in the middle of the list. It is not influenced by extreme values, thus, might be considered the best average to use. Therefore, we have used the Median throughout the analysis to represent the 'best average' of the response totals.

Please Note: where the MEDIAN score is 8 or greater, we have concluded that there is STRONG agreement with the statement / conclusion.

Where the MEDIAN score is 9 or greater, we have concluded that there is OVERWHELMING agreement with the statement / conclusion.

The opposite is true where the MEDIAN score is 2 or less. See the diagram below to explain this 'measurement':

Where the middle point (median) lies determines our classification

We did not attempt to do anything more sophisticated, such as looking at how the answers to questions varied.

Further Analyses

In a few cases it was felt useful to analyse the figures for a question in relation to a parameter such as sex, age or in which part of the village people lived. Notes are provided in the text where this is the case.

Released: March 2017

Some possible further analyses can be undertaken, following the initial review of the data, for example, by future MCC Sub-groups.

B. Overall Response Statistics

Response rate statistics

| | Number | % | From |
|--|--------|------|------|
| Total raw records received: | 122 | | |
| Duplicates/false starts (removed): | 7 | 5.7 | 122 |
| Useable records: | 115 | 94.3 | · · |
| Incomplete but useable: | 3 | 2.6 | 115 |
| Missing last page, otherwise complete: | 5 | 4.3 | · · |
| Entered online: | 77 | 67.0 | " |
| Paper submissions: | 38 | 33.0 | " |
| Estimate number of households: | 210 | | |
| Estimated number of households responding: | 104 | 49.5 | 210 |
| Estimated eligible population (>15): | 400 | | |
| Estimated individual response rate: | | 28.8 | 400 |

Notes:

- 1. The total number of households in the MCC area is assumed to correspond to the number of paper questionnaires delivered (as shown below). The estimated size of the eligible population is obtained by roughly doubling the estimated number of households, assuming the effect of single occupancy homes is more or less balanced by those with children. The figure of 400 more or less the same as the voters of 16 and over in the MCC area of 408.
- 2. The number of households responding is obtained from (i) the number of unique IP addresses of those completing on-line (very few households have more than one IP address), and (ii) the number of paper questionnaires submitted, assuming we had no households submitting more than one (which seems to be correct from inspecting them).

Released: March 2017

Replies per household (i.e. by IP address)

- 93 Single response households
- 11 Double response households
- 0 Triple responses households

C. Characterising the Population Responding

This information is copied from the Analysis Excel file tab "About You".

Question 39: Your sex:

| | Number | % |
|-------------|--------|-------|
| Male | 53 | 46.1 |
| Female | 50 | 43.5 |
| No response | 12 | 10.4 |
| | 115 | 100.0 |

Commentary:

There were roughly equal numbers of male and female respondents.

Question 40: Your age:

| | Number | % |
|-------------|--------|-------|
| Under 16 | 3 | 2.6 |
| 16-24 | 1 | 0.9 |
| 25-44 | 11 | 9.6 |
| 45-64 | 44 | 38.3 |
| 65 and over | 46 | 40.0 |
| No response | 10 | 8.7 |
| | 115 | 100.0 |

Commentary:

As expected, the population responding was predominantly over 45 (78.3% of responses).

Question 41: In which part of Muckhart do you live?

| | Number | % |
|-------------------------|--------|-------|
| Pool | 49 | 42.6 |
| Yetts | 16 | 13.9 |
| Upper Yetts | 7 | 6.1 |
| Golf Course Road | 12 | 10.4 |
| Rural/Other | 19 | 16.5 |
| No response | 12 | 10.4 |
| | 115 | 100.0 |

Commentary:

This distribution probably represents the actual distribution of people (and households) across the MCC area. Clearly the greatest concentration is in the Pool itself.

Question 42: I am responsible for a child / children under the age of 16

| | Number | % |
|-------------|--------|-------|
| Yes | 26 | 22.6 |
| No | 79 | 68.7 |
| No response | 10 | 8.7 |
| | 115 | 100.0 |

Commentary:

Just under a quarter of all respondents reported being responsible for children under 16.

Question 43: If you would like to receive a copy of the final Community Plan, please provide your contact details (email and / or postal address) here.

| | Number | % |
|-------------|--------|-------|
| Supplied | 52 | 45.2 |
| No response | 63 | 54.8 |
| | 115 | 100.0 |

Commentary:

Nearly half the respondents have requested a copy of the Community Plan (note: details held separately and confidentially).

D. Vision for Muckhart

Qu: 1 I believe that the above vision statement for Muckhart suitably describes the positive aspirations for the future of our community.

| Basic statistics | | | Distribution | | |

| | | | 9 | 9 | 7.8 |
| | | | 10 | 50 | 43.5 |
| | | | No answer | 2 | 1.7 |

Commentary:

Nearly unanimous positive response obtained (92% of scores were over 5), and the most frequent response being in complete agreement with the statement (score 10).

1. Image of the Village

Qu2 I support preparing the village for entry into Scotland's 'Village in Bloom' competition in 2017.

This question received a fairly negative response (56.1% of scores were 5 or less) though the most frequent response being in complete agreement with the statement (score 10).

Possible further analysis: Most comments relate to speeding issues and speed limits and the need to examine further options. This needs further analysis and actions agreed.

Pool: 62.5%

Yetts: 37.5%

Upper Yetts: 71.4%

Golf Course Road: 66.7%

Rural / Other: 26.3%

Commentary:

Those respondents residing in Upper Yetts, Golf Course Road and the Pool clearly believe that there are not sufficient traffic management measures in place in the Muckhart area.

Qu9 There are a sufficient number of safe pedestrian crossing points on the main road (A91), in and around the Pool and Yetts o' Muckhart.

This question received a mixed response (51.3% of scores were 5 or less) again with the most frequent response being in complete agreement with the statement (score 10).

Possible further analysis: Several comments relate to requests for a further crossing in Pool and one in Yetts. Again, this needs further analysis and actions agreed.

Qu10 The existing 40 MPH speed limit on the main road (A91) between the Yetts and the Pool, and on the main road (A823) into the Yetts from both Rumbling Bridge and Glendevon, requires to be replaced with a 30 MPH speed limit, to reduce speeding traffic and to improve road safety.

Those respondents residing in Upper Yetts unanimously, and those in the Pool strongly, agree with the statement and there is clear support also from those residing in Yetts and Golf Course Road.
